what is xml xml or extensible markup language is a specification for storing information it is
also a specification for describing the structure of that information and while xml is a markup
language just like html xml has no tags of its own it allows the person writing the xml to
create whatever tags they need the only condition is that these newly created tags adhere to
the rules of the xml specification in the seven years since the first edition of xml visual
quickstart guide was published xml has taken its place next to html as a foundational
language on the internet xml has become a very popular method for storing data and the
most popular method for transmitting data between all sorts of systems and applications the
reason being where html was designed to display information xml was designed to manage it
xml visual quickstart guide 2nd edition is divided into seven parts each part contains one or
more chapters with step by step instructions that explain how to perform xml related tasks
wherever possible examples of the concepts being discussed are displayed and the parts of

the examples on which to focus are highlighted the order of the book is intentionally designed to be an introduction to the fundamentals of xml followed by discussions of related xml technologies

the other day i watched a discovery documentary with stephen harkins in which he invited three students to take part in a game with him without any preconceived ideas in which the program s producers using high tech equipment tried to reproduce mechanisms of nature to explain the origin of life of course there were always inserts defending the ideology of spontaneous evolutionism to explain not only life but the entire functioning mechanism of the cosmos the program was very didactic in explaining the universe and physics leaving us amazed by universal mechanics the crux of the matter is that discovery the bbc and the entire academic environment explain these wonders as being the work of chance the irrational having created implacable laws of physics chemistry and biology the problem of the origin of the universe and life is ideological secular universities consider that a professor who talks about evolutionism is someone who is applying logical reasoning to explain the universe while if a professor starts to show evidence that the universe has an intelligent designer who designed everything he is considered superstitious a religious indoctrinator and someone who is confusing science with religion in short evolutionists revoke the right of creationists to talk about god as a hypothesis for the origin of the universe evolutionism is indeed a dictatorial indoctrination because it does not even allow the possibility of a creator god to be brought up in scientific debate the biological technology embedded in every living being indicates that there is a special being and that everything in nature is so arranged with each species in its natural habitat that this can only indicate intelligence that pre conceived life all computer parts are there not by chance but because someone designed them what about the millions of highly complex biological devices that permeate our world do they exist accidentally please don t do violence to my brain don t try to brainwash me in schools in

scientific documentaries and so on follow me on my fifth journey through the universe in search of evidence of a creator in every detail of life
